

# SHOULDN'T WATER BE CENTRAL TO PATIENT CARE?

**WITH BRITA PROFESSIONAL.**

Hygienic safe water supply for your patients.

**THINK YOUR WATER**

# H<sub>2</sub>O IS THE FORMULA FOR GOOD HEALTH.

## **ENSURE HYGIENIC SAFE & FREE OF CHARGE WATER SUPPLY TO PATIENTS, BY BOTTLE SERVICE VIA NURSING STAFF AND PATIENT SELF-SERVICE.**

Ensure a hygienic and free-of-charge water supply for patients – self-served or brought to them in bottles by staff. Drinking water is good for you. In fact, everyone should drink approximately two litres of water every day to be at their best. Hydration is essential to our well-being – which is especially important in healthcare where swift patient recovery and recuperation is critical.

Water in hospitals and other healthcare settings must meet exceptionally strict standards. Robust hygiene is essential. In particular, minimising the risk of infection by ensuring a consistently clean water supply is a top priority. But equally important is the need to ensure cost-efficiency.

BRITA Professional water dispensers are an effective answer to these challenges. Patients, visitors and staff can enjoy filtered, unchilled still, chilled still and chilled sparkling water on tap – refreshingly, tasty and – thanks to the “BRITA Hygiene Solution” – hygienic and safe.

Decades of experience in the deployment of water dispensers in hospitals and nursing homes make BRITA the ideal partner for supplying patients and staff with fresh, filtered tap water. BRITA offers specialised solutions for hospitals and healthcare facilities, including carafes and disposable or reusable bottles in accordance with applicable hygiene regulations.

## A SUPPLY OF RELIABLY CLEAN, AFFORDABLE WATER – YOUR BENEFITS:

### Tap into cost savings.

Buying, transporting and storing bottles and crates is a laborious, wasteful process. It consumes precious resources, and costs time and money – and it takes up valuable storage space. Moreover, they have to be delivered by lorry or van, and generate plastic waste. The combined result is a bigger ecological footprint.

- Dispensers connected to the mains completely eliminate wastage and hassle associated with buying, transporting and storing bottled water.
- One litre of refreshing water from a BRITA Professional water dispenser costs only about cents (depending on your utility and equipment). As a general rule, your investment will pay off during the first year.

Cost effective source of fresh water: BRITA is your partner for clean, inexpensive water. We are happy to advise you on the right model for your requirements. And we can gladly install your preferred system, and provide maintenance and other services. We can also supply all consumables – plus customisable, returnable BRITA bottles and other accessories. In addition, you have a choice of financing options.

### Opt for a tried-and-tested approach to maintenance.

An effective maintenance concept is crucial to ensuring hygiene. BRITA water dispensers are easy and cost-efficient to maintain. We have the skills and resources to ensure the job's done well, to the benefit of your patients, your staff, and your organisation as a whole.

## REFRESHING: CONSISTENTLY CLEAN, GREAT-TASTING WATER.

Water hygiene is a key focus – especially in healthcare environments. BRITA has years of experience in equipping hospitals with point-of-use water dispensers.

### BRITA Hygiene Solution.

The exclusive “BRITA Hygiene Solution” is a special hygienic concept, -dedicated for highly sensitive areas, such as hospitals.

It consists of three important elements:

- The entry filter (CLARITY Protect) eliminates potential bacteria (0,15µm) from the tap water.
- The sterile filter eliminates potential bacteria (0,2µm) before the tap.
- The unique Thermal Germ Barrier protects from potential retrograde contamination due to external influences.

This special 3-Zone-Protection provides the safety requirements especially needed in sensitive areas. This is proven by numerous long-term studies of hygiene institutions.

### Water dispensers and bottles featuring your logo. A complete, customised solution from BRITA.

We offer a broad range of mains-fed water dispensers – combining outstanding design with outstanding technology. So you will find exactly what you need, with the right capacity, for your organisation.

Moreover, you can combine this dispenser with an attractive bottle (tritan or glass), featuring your logo, to create a complete and customised solution.

The result is your very own source of water, with an attractive look and feel – a visible symbol of your high standards, and total commitment to excellent healthcare.

## WATER DISPENSERS FOR HEALTHCARE ENVIRONMENTS.

### VIVREAU Sodamaster 50

The VIVREAU Sodamaster 50 is the perfect solution for medium consumption demands in the healthcare environment. It provides chilled still and chilled sparkling water (optional medium or classic) or unchilled still water.
